## **Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine)**

Cardiac catheterization has long been a central diagnostic modality in the evaluation of children, adolescents, and adults with congenital heart disease, and in children with acquired heart disease. Over the past two decades, transcatheter interventions have become equally important in the treatment of pediatric and congenital heart disease. Some transcatheter therapies have become established as the standard of care for congenital cardiovascular anomalies previously managed surgically, others serve to supplement surgery in the integrated management of complex lesions, and still others are in their infancy, as pediatric interventional cardiology continues to advance in step with the broader field of pediatric cardiovascular medicine.

Since the previous edition of this book, new technologies and techniques have been introduced to the field of pediatric interventional cardiology, much has been learned about established transcatheter therapies, and there has been a substantial increase in the volume of published data on outcomes of transcatheter procedures in congenital and pediatric heart disease. With increasing experience, the role of interventional catheterization has become solidified as an integral component of the comprehensive management of patients with essentially all forms of congenital heart disease. Cardiac catheterization has also become established as a distinct subspecialty within the discipline of pediatric cardiology, and at many centers has become the purview of cardiologists who have received specialized training in interventional catheterization and whose practice is focused on catheterization. This book is targeted to trainees and established interventional cardiologists alike, and is intended as a comprehensive reference for the clinical practice of diagnostic and interventional cardiology in pediatric and congenital heart disease.

In the organization of this book, a combination of procedure-based and problem-based approaches has been employed. The structure of the book has been updated to make it more reader friendly, chapters have been added to address new techniques and problems in the field, and greater emphasis has been placed on evaluation of outcomes of transcatheter interventions in congenital heart disease.

Section 1 covers the fundamentals of cardiac catheterization, with chapters devoted to pre-procedure patient evaluation, sedation and anesthesia, vascular access and related issues, catheterization equipment and its use, hemodynamic evaluation, angiography, radiation and radiation safety, and echocardiography in the catheterization lab.

Sections 2 through 4 include procedure-based chapters that are organized according to the technical type of intervention. Section 2 is devoted to transcatheter interventions for obstructive lesions, including valvar stenoses and vascular obstructions. Section 3 includes chapters that cover interventions to close various pathologic intracardiac communications and vascular anomalies. Section 4 includes chapters covering interventions performed to create or enlarge intracardiac communications, as well as other interventions.

Section 5 focuses on the applications of catheterization and transcatheter interventions in the evaluation and management of specific patient populations. This problem-based or patient-based focus, which is substantially expanded from the previous edition of the book, reflects the expanding role of catheterization in the comprehensive management of pediatric and congenital heart disease, and addresses emerging applications of transcatheter interventions, including management of the patient receiving extracorporeal circulatory support, hybrid transcatheter-surgical interventions, and prenatal cardiac intervention.

Section 6 includes two chapters that cover outcome assessment and regulatory issues pertinent to the pediatric cardiology in general and interventional cardiology in particular.

### **From reader reviews:**

#### **Louie Thompson:**

The publication untitled Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine) is the e-book that recommended to you to learn. You can see the quality of the reserve content that will be shown to anyone. The language that author use to explained their way of doing something is easily to understand. The article author was did a lot of exploration when write the book, so the information that they share to you personally is absolutely accurate. You also will get the e-book of Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine) from the publisher to make you a lot more enjoy free time.

#### **Houston Boynton:**

Your reading 6th sense will not betray you actually, why because this Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine) book written by well-known writer we are excited for well how to make book which might be understand by anyone who also read the book. Written inside good manner for you, dripping every ideas and publishing skill only for eliminate your own personal hunger then you still uncertainty Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine) as good book not only by the cover but also by the content. This is one publication that can break don't evaluate book by its handle, so do you still needing another sixth sense to pick this particular!? Oh come on your reading sixth sense already told you so why you have to listening to an additional sixth sense.

#### **Lola Hernandez:**

Reading a book to be new life style in this 12 months; every people loves to examine a book. When you go through a book you can get a large amount of benefit. When you read textbooks, you can improve your knowledge, because book has a lot of information on it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your examine, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, these kinds of us novel, comics, as well as soon. The Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine) provide you with new experience in examining a book.

#### **Luther Keller:**

You will get this Diagnostic and Interventional Catheterization in Congenital Heart Disease (Developments in Cardiovascular Medicine) by browse the bookstore or Mall. Only viewing or reviewing it could possibly to be your solve problem if you get difficulties for the knowledge. Kinds of this book are various. Not only by written or printed but also can you enjoy this book through e-book. In the modern era including now, you just looking from your mobile phone and searching what their problem. Right now, choose your own personal ways to get more information about your publication. It is most important to arrange yourself to

make your knowledge are still upgrade. Let's try to choose suitable ways for you.
