Endogenous Effort, Promotion, Retirement and Heterogeneous Ability in a Labor Hierarchy

Gerald E. Sohan

Endogenous Effort, Promotion, Retirement and Heterogeneous Ability in a Labor Hierarchy Gerald E. Sohan

This is a AIR FORCE INST OF TECH WRIGHT-PATTERSONAFB OH report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A605333. The abstract provided by the Pentagon follows: This work simultaneously attacks the questions of jointly endogenous effort, retirement, and promotions. Workers endowed with heterogeneous ability are employed within a firm's hierarchical promotion structure. Analyzing the situation step by step, worker retirement, consumption and effort decisions are examined first. Using savings, laborers store earnings for future use and eventually choose to retire, continuing to consume earnings from accumulated savings. In retirement, workers avoid disutility from working. Utility of laborers improves discretely upon retirement. Worker consumption tends to be constant over time. Effort during employment is efficient and independent of worker ability. Workers cannot be ordered by ability using observed consumption, effort or retirement. Next, the nature of hierarchical firms is examined. When manager decisions affect lower level worker productivity, firms desire higher ability workers as managers. A given worker prefers to work as a manager versus an underling. Firms must devise a promotion system to identify able employees for advancement since workers do not self select. Promotion opportunities automatically create tournament situations. With promotion tournaments, effort is unevenly distributed across worker ability. Workers nearest the promotion cutoff work hardest. Without collusion, smaller promotion contest groups result in higher overall worker effort.
