Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us Emily Gertz, Patrick Di Justo

After the devastating tsunami in 2011, DYIers in Japan built their own devices to detect radiation levels, then posted their finding on the Internet. Right now, thousands of people worldwide are tracking environmental conditions with monitoring devices they've built themselves. You can do it too!

This inspiring guide shows you how to use Arduino to create gadgets for measuring noise, weather, electromagnetic interference (EMI), water purity, and more. You'll also learn how to collect and share your own data, and you can experiment by creating your own variations of the gadgets covered in the book. If you're new to DIY electronics, the first chapter offers a primer on electronic circuits and Arduino programming.

- Use a special microphone and amplifier to build a reliable noise monitor
- Create a gadget to detect energy vampires: devices that use electricity when they're "off"
- Examine water purity with a water conductivity device
- Measure weather basics such as temperature, humidity, and dew point
- Build your own Geiger counter to gauge background radiation
- Extend Arduino with an Ethernet shield—and put your data on the Internet
- Share your weather and radiation data online through Pachube

From reader reviews:

Tenesha Little:

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite book and reading a reserve. Beside you can solve your condition; you can add your knowledge by the publication entitled Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us. Try to stumble through book Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us as your close friend. It means that it can to become your friend when you feel alone and beside that course make you smarter than before. Yeah, it is very fortuned for you. The book makes you considerably more confidence because you can know anything by the book. So , let us make new experience and knowledge with this book.

Dan Hanner:

Information is provisions for those to get better life, information these days can get by anyone in everywhere. The information can be a know-how or any news even a problem. What people must be consider if those information which is within the former life are challenging be find than now is taking seriously which one works to believe or which one the actual resource are convinced. If you get the unstable resource then you have it as your main information you will see huge disadvantage for you. All of those possibilities will not happen inside you if you take Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us as your daily resource information.

Jean Gadson:

Why? Because this Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us is an unordinary book that the inside of the book waiting for you to snap the item but latter it will distress you with the secret this inside. Reading this book close to it was fantastic author who have write the book in such wonderful way makes the content inside easier to understand, entertaining means but still convey the meaning entirely. So , it is good for you for not hesitating having this ever again or you going to regret it. This amazing book will give you a lot of advantages than the other book include such as help improving your talent and your critical thinking technique. So , still want to hold up having that book? If I ended up you I will go to the reserve store hurriedly.

Jack Murray:

Reading can called imagination hangout, why? Because when you are reading a book especially book entitled Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us your thoughts will drift away trough every dimension, wandering in every single aspect that maybe unfamiliar for but surely might be your mind friends. Imaging each word written in a publication then become one form conclusion and explanation in which maybe you never get ahead of. The Environmental Monitoring with Arduino: Building Simple Devices to Collect Data About the World Around Us giving you

an additional experience more than blown away the mind but also giving you useful info for your better life in this particular era. So now let us present to you the relaxing pattern is your body and mind is going to be pleased when you are finished looking at it, like winning a game. Do you want to try this extraordinary paying spare time activity?
